Chapter 1. General Provisions

Article B1.1 – Definitions

In addition to part A, the following definitions are used in part B:

- | | |
|---------------------|--|
| a. Research project | Compulsory internship including master's thesis and colloquium |
| b. Study Plan | An individual study plan for the student's master programme |
| c. Course | Education imparted in a series of lessons or meetings |
| d. Admissions Board | Track-specific committee (track coordinator + VU/UvA staff member) that decides on admission |

Article B1.2 – General information master's programme

1. The Master's programme Physics and Astronomy (CROHO 65016), is offered on a full-time basis and the language of instruction is English.
2. In this document the reader should consider articles referring to the new track names to be applicable to the old tracks as well.
3. The programme has a workload of 120 EC.
4. A component of the programme generally consists of 3 EC or multiples of this number.
5. Within the programme Physics and Astronomy, the following tracks are offered:
 - a. Advanced Matter and Energy Physics
 - b. Astronomy and Astrophysics
 - c. Biophysics and Biophotonics (formerly called Physics of Life and Health)
Students enrolled under the track PLH can graduate until August 31, 2020. Upon graduation, the name of the PLH track will appear on their diploma supplement.
 - d. Gravitation, Astro- and Particle Physics (GRAPPA)
 - e. Science for Energy and Sustainability
 - f. Theoretical Physics
6. In each Master track the student may choose a major or a minor from the list below (see Article B4.1).
 - a. Major Science Communication;
 - b. Major Science in Society;
 - c. Major Teaching;
 - d. Minor Teaching;
 - e. Minor Tesla.
7. The student determines the content of the master's programme in consultation with the track coordinator of the master's programme and according to the rules of Chapter 3. The study programme must be approved by the Examinations Board. For this purpose, a completed Study Plan has to be submitted to the Examinations Board. The student submits this plan, approved by the track coordinator, to the Examinations Board. If the student wants to change the contents of the study programme, the student promptly consults with the track coordinator of the study programme. If this results in a new plan the student submits this plan, approved by the track coordinator, to the Examinations Board.

Article B1.3 – Enrolment

The programme starts at the beginning of the first semester (September). This enrolment date ensures a programme that can be expected to be completed within the official period.

Chapter 2. Aim of the programme and exit qualifications

Article B2.1 – Aim of the programme

1. The general objective of the Master's programme is to provide students with such knowledge, skills, abilities and insight in the field of Physics and/or Astronomy, including the necessary mathematical, experimental, computational and communicative skills, to enable them to work as a professional Physicist or Astronomer, or to become qualified to pursue advanced training as scientific researcher.
2. The programme also aims at furthering the understanding of the position and role of physics and astronomy in the sciences and in society, and to further a social sense of responsibility.
3. The aim of the Master's programme in Physics and Astronomy, is to:
 - a. educate students to become independent academic professionals, through conducting fundamental scientific research as well as working with current scientific knowledge, and applying this knowledge in new and continuously changing practical situations;
 - b. actively stimulate interdisciplinary collaboration in the development of science, based on knowledge in the field of physics/astronomy;
 - c. offer students the possibility to develop skills, knowledge and insight in a specialisation in the field of physics/astronomy, with emphasis on formulating relevant scientific questions and the approach to formulate answers to these questions;
 - d. provide student-oriented education that is of a high, internationally recognised quality;
 - e. offer students the opportunity to gain knowledge and insight in an international setting;
 - f. provide an inspiring academic learning environment, and to offer feasible study specialization programmes to a demanding and heterogeneously composed student population;
 - g. develop the ability in students to convey acquired knowledge to others.

Article B2.2 – Exit qualifications

1. The graduate of the Master's programme Physics and Astronomy:
 - a. has a thorough theoretical and practical knowledge of modern physics/astronomy, including the knowledge of other disciplines required for that purpose;
 - b. has a thorough knowledge of theoretical and/or experimental methods and research experience in at least one sub-area within the physics/astronomy discipline;
 - c. is able to become acquainted with other sub-areas of the physics/astronomy discipline within a reasonable period of time;
 - d. is able to formulate a research plan based on a realistic problem definition within the physics/astronomy discipline;
 - e. is able to analyse and formulate research results and to draw conclusions;
 - f. is able to write a scientific report or an internationally accessible scientific publication and to participate in discussions on (specialised) topics in the field of study;
 - g. is able to consult international professional literature in the relevant sub-areas and to apply the knowledge gained from that;
 - h. is able to apply one's knowledge of physics/astronomy in a broader (multidisciplinary) context;

- i. is employable in those positions for which knowledge and research skills in the field of physics/astronomy are a prerequisite;
 - j. has sufficient knowledge of, and insight in the social role of physics/astronomy to make a sound choice regarding one's own profession, as well as in the exertion of this profession;
 - k. is able to cooperate with other people, to convey knowledge to other people, and to give a presentation both to discipline specialists and to a broader audience.
2. Students selecting an experimental or observational master's programme must be able to independently conduct experiments, or devise observations and the corresponding controls, conducting and evaluating these within a given period of time. In addition, each graduate in the programme curriculum:
 - a. is able to compare and incorporate obtained research results and conclusions within the framework of the results of other scientists;
 - b. is able to form a vision on the development of scientific research in the field of physics/astronomy;
 - c. is able to quantitatively and qualitatively analyse physics/astronomy processes, to incorporate data in existing or new models and to present the results at various levels of abstraction.
3. In addition to paragraph 1 and 2, the student who has completed the track Advanced Matter and Energy Physics has obtained the following track-specific qualifications:
 - a. a well-founded knowledge of the theoretical background behind experimental physics in the sub-disciplines: (hard and soft) condensed matter physics; atomic and laser physics;
 - b. a well-founded knowledge of experimental approaches of relevance in modern research into at least one of the following research fields:
 - i. emergent materials, strongly correlated electron systems and unconventional superconductivity;
 - ii. energy materials and processes for (solar) energy conversion;
 - iii. complex liquids, granular and soft bio-matter;
 - iv. high-precision laser spectroscopy, ultracold quantum gases, quantum information and simulation with ultracold atoms.
 - c. proficiency in applying the theoretical knowledge learned to enable the interpretation of the results from experimental work - executed by the graduate at least in part as an independent investigator able to do guided research - in a research project in a field within or close to those given in section b above.
4. In addition to paragraph 1 and 2, the student who has completed the track Astronomy and Astrophysics has obtained the following track-specific qualifications:
 - a. a well-founded knowledge of experimental or theoretical approaches in at least one of the following research fields:
 - i. X-ray binaries and compact objects
 - ii. Gamma ray bursts and radio transients
 - iii. Exoplanets and planet formation
 - iv. Stars and stellar populations
 - v. Advanced instrumentation
5. In addition to paragraph 1 and 2, the student who has completed the track Biophysics and Biophotonics (formerly called Physics of Life and Health) has obtained the following track-specific qualifications:

- a. a well-founded knowledge of the physics background behind processes on a cellular or organ level
 - b. a well-founded knowledge of experimental or simulation approaches into at least one of the following research fields:
 - i. Novel imaging modalities;
 - ii. Novel therapeutic applications;
 - iii. Cellular biophysics;
 - iv. Organ biophysics;
 - c. proficiency in applying the theoretical knowledge learned to enable the interpretation of the results from experimental work - executed by the graduate at least in part as an independent, principal investigator - in a research project in a field within or close to those given in section b above.
6. In addition to paragraph 1 and 2, the student who has completed the track Gravitation, Astro- and Particle Physics (GRAPPA) has obtained the following track-specific qualifications:
- a. a well-founded theoretical knowledge in particle physics and/or astroparticle physics and/or cosmology;
 - b. a well-founded knowledge of experimental or theoretical approaches in at least one of the following research fields:
 - i. Standard Model and Beyond the Standard Model Physics;
 - ii. Cosmology;
 - iii. Dark Matter;
 - iv. Gravitational Waves and tests of Gravity;
 - v. Cosmic Messengers;
 - vi. (Astro-)Particle Physics Detector R&D.
7. In addition to paragraph 1 and 2, the student who has completed the track Science for Energy and Sustainability has obtained the following track-specific qualifications:
- a. a thorough knowledge of the scientific, technological and societal challenges for our future associated with energy and sustainability problems;
 - b. proficiency in analysing and evaluating the current energy and sustainability problems;
 - c. proficiency in applying the acquired theoretical and practical insights in day-to-day practice at an institution, company or organization, strongly focused on providing scientific solutions to current and future energy and sustainability problems;
8. In addition to paragraph 1 and 2, the student who has completed the track Theoretical Physics has obtained the following track-specific qualifications:
- a. a well-founded and working knowledge of Quantum Field Theory for particle physics as well as many body physics;
 - b. a thorough knowledge of the fundamental aspects in modern statistical physics and condensed matter theory;
 - c. the student is informed about basic theoretical concepts as second quantization, path integrals;
 - d. the student is capable of finding the appropriate theoretical framework for a wide range of physics problems.
9. The exit qualifications of the majors and minors are stated in appendix 3.

Chapter 3. Admission to the programme

Article B3.1 – Entry requirements (TER)

1. Students who have successfully completed the following degrees may be admitted:
 - a. a Bachelor's degree in Physics and Astronomy, in Physics, in Applied Physics, or in Astronomy, awarded by a Dutch University;
 - b. a Bachelor's degree in *Bèta-gamma met een Natuurkunde Major* (Bèta-gamma with a Physics Major), awarded by the University of Amsterdam;
 - c. a bachelor's degree awarded by the Amsterdam University College with a *Science Major, track Physics*, including the courses Electrodynamics, Quantum Physics and Mathematical Methods in Physics;
2. Without prejudice to the provisions of paragraph 1, the Admissions Board may grant admission to the study programme when concluding that the previous education of the candidate is equivalent to the bachelor's degree referred to in paragraph 1.
3. Without prejudice to the provisions of paragraphs 1 and 2 the Admissions Board may grant admission to a student whose previous education does not meet aforementioned requirements for admission to the study programme of a chosen track, when concluding that the candidate is able to meet the admission requirements within a reasonable period of time. At the request of a candidate, and if the Admissions Board has decided additional education feasible, the Admissions Board may draw up a pre-master's programme of maximum 42 EC as an admission requirement. After completion of this pre-master's programme a letter of admission will be issued, exclusively for the stated master's programme and track.
4. Without prejudice to the provisions of paragraphs 1, 2 and 3, when the Admissions Board decides that the additional required education on Bachelor's-level for a candidate is for not more than 12 EC, direct admission to the master programme can be granted. In this case the additional course(s) to be taken by the student will be part of the *free* elective components.

Article B3.2 – Pre-master's programme

1. Holders of a bachelor's degree in a field that sufficiently corresponds with the field of the master's programme may apply for admission to the pre-master's programme. In accordance to Article B3.1 section 3 the Admissions Board may draw up a pre-master's programme of maximum 42 EC. This pre-master's programme may be taught partially in Dutch and partially in English. The programme must be completed in a maximum of 2 years.
2. The possible content of the pre-master's programme is described in paragraph 5a, section B, of the Teaching and Examination Regulations for Bachelor's programme Natuur- en Sterrenkunde. It is also listed in Appendix 2 of this OER B.3. Proof of a successfully completed pre-master's programme shall serve as confirmation of admission to the master's programme specified within it in the subsequent academic year.

Article B3.3 – Restrictions on the number of students admitted to the master's programme

No restrictions

Article B3.4 – Intake dates

A request for admission to the master's programme starting in September must be received before May 1 in the case of non-Dutch EU students, July 1 in the case of Dutch students and before February 1 in the case of non-EU students. Under exceptional circumstances, the Admissions Board may consider a request submitted after this closing date.

Article B3.5 – English Language Requirements

1. The proficiency requirement in English as the language of instruction can be met by the successful completion of one of the following examinations:
 - a. IELTS: 6,5, at least 6 on each sub-score (listening/reading/writing/speaking);
 - b. TOEFL paper-based: 580, paper-delivered at least 22 on each sub-score;
 - c. TOEFL Internet-based test: 92, at least 22 on each sub-score (listening/reading/writing/speaking);
The foregoing examination must have been taken within two years before the student's enrolment.
 - d. C1 Advanced (CAE): minimal result 170 (overall C)
 - e. C2 Proficiency (CPE): minimal result 170 (overall C)
Please note that the TOEFL-code for the University of Amsterdam is 9011
2. An exemption from the English examination referred to in the first paragraph shall be granted to students who:
 - a. have received a diploma in secondary or tertiary education in one of the following English-speaking countries: Australia, Canada (English), New Zealand, Ireland, the United Kingdom or the United States of America;
 - b. hold an English-language 'international baccalaureate' diploma;
 - c. possess a bachelor's degree from a Dutch university satisfying the requirement of sufficient command of the English language;
 - d. passed the final examination for the subject of English as part of one of the following diplomas: VWO, Belgian ASO (Flemish).

Chapter 4. Content and organisation of the programme

Article B4.1 – Organisation of the programme

Depending of the specialization programme the study programme is composed of components according to Table 1.

A complete list of courses provided by the master's programme can be found in Appendix 1. Every component will be tested. Within the master's programme different types of testing and different types of teaching methods are used. These are described per component in the Appendix 1 and in the course catalogue.

Table 1.

Components	Regular programme	Programme with a major	Programme with a minor
Compulsory components for the track	At least 12 EC**		12 EC
Elective components discipline	Max 24 EC**	Total: 24 EC	18 EC
Track specific compulsory project	6 EC		6 EC
Research Project (incl. thesis and colloquium)	60* EC	36 EC	54 EC
Free elective components	12 EC		
Academic skills in the Master	6 EC		
Major or minor programme		60 EC	30 EC
Total EC	120 EC	120 EC	120 EC

* The research project is 60 EC. A different organization of the research project requires permission of the Examinations Board. The research project can be split in maximally 2 projects, 1 project is at least 36 EC. Each project is a multiple of 6 EC. The second research project is at least 18 EC.

** Compulsory courses and restricted-choice electives together must be 36 EC, including at least 12 EC compulsory courses.

1. The student can choose between the regular programme and a programme containing a major or a minor. These are:
 - a. Major Teaching;
 - b. Minor Tesla;
 - c. Minor Teaching;
 - d. Major Science Communication (VU);
 - e. Major Science in Society (VU).
2. Regarding majors:

A major consists of 60 EC. It has to be combined with disciplinary components as listed in table 1, with the general compulsory components in order to meet the general requirements of the programme. Students have to go through a separate intake procedure for admission to a major.
3. Regarding the major Teaching:

Students who have completed an Educative Minor of 30 EC during their bachelor's programme may submit a non-standard study programme for approval to the Examinations

Board of the *Interfacultaire Lerarenopleidingen*, after discussing this non-standard study programme with the coordinator of the major Teaching and the track coordinator of the master's programme. The exit qualifications of the major can be found in Appendix 3. Students first have to finish 48 EC of the obligatory research part of the programme before starting the major Teaching.

4. Regarding the minor Tesla:

The minor Tesla consists of 30 EC. It must be combined with a regular programme, comprising at least 90 EC. The minor consists of a course component and a project-based component. This project-based component has to be supervised by a Faculty of Science examiner and is subject to prior approval of appropriateness to the MSc Physics & Astronomy by the Physics & Astronomy programme director, as well as the Examinations Board. An examiner from the research programme has to be appointed as a second assessor. The learning objectives of this minor can be found in Appendix 3.

Article B4.2 – Compulsory components

The regular programme includes compulsory components with a total study load of at least 12 EC. The contents and format of the compulsory components of the various tracks are listed in Appendix 1 and further described in the Course Catalogue, stating the necessary entry requirements for successful participation in the component.

Article B4.3 – Practical components

1. In addition to, or instead of, classes in the form of lectures, the elements of the master's examination programme often include a practical component as defined in article A1.2 of part A. Appendix 1 contains information on the types of classes in each part of the programme. Attendance during practical components is mandatory.
2. When performing practical components, students must adhere to the faculty's safety regulations.
3. The programme consists of research-related components with a study load of at least 60 EC (36 in the major, 54 in the minor). The research-related components always include the compulsory components: a research assignment of at least 54 EC (30 in the major, 48 in the minor) and a final report and a scientific presentation with a study load of 6 EC.

Article B4.4 – Elective components

1. Students choose components in the field of the discipline with a study load of at least 24 EC in consultation with the track coordinator of the master's programme and according to the rules stated in Appendix 1 and in the Course Catalogue of the study programme. Only after the written approval of the track coordinator at most 12 EC of these components may be chosen from another track.
2. Elective components are considered to be those components in the field of the discipline stated in Appendix 1, and included in the Course Catalogue of the discipline, or of components offered by another Dutch or foreign university, being according to the Examinations Board of a comparable level.
3. Course components successfully completed elsewhere or that are not included in Appendix 1 during the programme may supplement the student's examination programme, subject to prior permission from the Examinations Board.
 - a. The courses have to be followed at an accredited university or institute
 - b. The courses have to be relevant to the master chosen.
4. In exceptional cases, and only after the agreement of the track coordinator, students may choose Bachelor's-level free elective components as part of their programme.

5. In terms of content, elective components must not show too much similarity to other components of the student's curriculum. The acceptable degree of similarity will be decided by the Examinations Board.

Article B4.5 – Free curriculum

The student may compile a curriculum of his/her own choice, which has to be approved by the Examinations Board. The free curriculum must possess at least the extent, breadth and depth of a regular master's programme and must be in line with the learning outcomes of the degree programme. At least one half of the proposed curriculum has to consist of components of the regular programme (see Table 1), including the Research Project.

Article B4.6 – Sequence and admission requirements

1. Participation in a course may be restricted to students that have completed certain other programme components. Information about sequence and admission requirements can be found in the course catalogue.
2. In cases where the result of a component has not been determined within the time periods mentioned in Article A4.4 of part A, this component may not be required as prior knowledge for the subsequent component.

Article B4.7 – Participation practical training and tutorials

Not applicable

Article B4.8 – Exemption

1. At the written request of the student, the Examinations Board may exempt the student from taking one or more examination components, if the student:
 - a. Has passed a component of an academic or higher professional education programme that is equivalent in both content and level;
 - b. Has demonstrated through his/her work and/or professional experience that he/she has sufficient knowledge and skills with regard to the relevant component.
2. This exemption does not apply to the Research Project.
3. Exemptions from examinations (or parts thereof), if granted, will be valid for the same period of examinations.
4. A maximum of 60 EC can be accumulated through granted exemptions.

Article B4.9 – Degree

A student who passes the final examination of a programme is awarded a Master of Science degree. The degree awarded is stated on the diploma.

Article B4.10 – Double Master's Degree Mathematics and Physics and Astronomy/ track Theoretical Physics

1. The candidate must be admitted to both Master programmes.
2. The total study load of the programme of the candidate should amount to at least 180 EC, comprising
 - a. 46 EC Compulsory components
 - b. 72 EC Master Project Mathematics and Theoretical Physics
 - c. 12 EC Restricted- choice electives physics courses
 - d. 38 EC Restricted- choice electives mathematics courses
 - e. 12 EC Free-choice elective courses

3. The candidate has conducted an integrated research project Master Project Mathematics and Theoretical Physics (72 EC), replacing Master Project Mathematics (36 EC) and Research Project Physics and Astronomy (60 EC). This must be supervised by examiners from the two Master's programmes. The project must be assessed as a pass by both examiners according to the standards and procedures for the master's project assessment of the respective master's degrees.
4. The integrated research project of article B4.10, point 3 can be replaced by two separate projects: Master Project Mathematics (36 EC), and Research Project Physics and Astronomy (60 EC). In this case the total load of the programme must be at least 192 EC.
5. The compulsory components are
 - a. Differential Geometry (8 EC, replaces Mathematical Methods from MSc Physics & Astronomy)
 - b. Lie Groups (8 EC, replaces Group Theory from MSc Physics & Astronomy)
 - c. Quantum Field Theory (6 EC)
 - d. Statistical Physics & Condensed Matter Theory 1 (6 EC)
 - e. A joint course in Mathematics and Theoretical Physics (8 EC). In 2019/2020 the course will be Topology in Physics (6 EC).
 - f. Master seminar Algebra, Geometry & Mathematical Physics (6 EC).
 - g. Student seminar Theoretical Physics (6 EC).
6. The restricted-choice elective physics courses consist of 12 EC of physics courses from the MSc Physics & Astronomy, including at least 6 EC from the track Theoretical Physics. The courses Mathematical Methods and Group Theory cannot be taken as part of these 12 EC. The Teaching and Examination Regulations of the MSc Physics & Astronomy contains the list of courses of the MSc Physics & Astronomy, and the sub list of courses from the track Theoretical Physics.
7. The restricted-choice elective courses from MSc Mathematics consist of 38 EC. It includes at least one of the courses Algebraic Topology 1, Algebraic Geometry 1 and Riemann Surfaces and contains two restricted-choice electives from the list of advanced courses of the specialization directions Algebra & Geometry and Mathematical Physics. The Teaching and Examination Regulations of the MSc Mathematics contains the list of restricted-choice elective courses of the MSc Mathematics (appendix 2 TER Mathematics part B), as well as the list of advanced courses in the specialization directions Algebra & Geometry and Mathematical Physics (art. B4.1.2 TER part B Mathematics).

Article B4.11 – Double Master's programme (two-year programmes)

In case a student combines two master's programmes and their components, the following requirements must be met in order to be awarded two master's degrees:

1. The total programme of the candidate should amount to at least 180 ECTS credits. The student follows the Physics and Astronomy Programme with a minor (cf. Table 1) (with 90 EC Physics and Astronomy components) and obtains 30 EC exemptions (instead of the minor) with courses from the other master's programme.
2. The candidate's work for the programme (lectures, research work, etc.) must be of such a standard that all the compulsory requirements of each of the two programmes have been met.
3. The candidate must have conducted separate research work for both master's degrees. This may consist of two separate research projects (incl. thesis and colloquium) with supervisors from the respective study programmes. In the case of an integrated research project, this

must be supervised by two staff members appointed from the two study programmes. Both staff members must assess the work as a pass. The total number of credits given for an integrated research project (incl. thesis and colloquium) is 3/4 of the sum of the credits given for two independent research projects.

4. The Examinations Boards of both study programmes must approve the student's double master's programme before the student commences the double master's programme.

Article B4.12 – Participation in courses and rules for priority admission

1. Every student must enrol for every component. To participate in courses, the student must enrol within the period indicated in Appendix 1 and in the Course Catalogue and according to procedures mentioned there. The student may be refused the opportunity to participate if he/she does not enrol or fails to enrol in time.
2. Admission to courses with limited capacity takes place based on previously established and published admission criteria and rules for priority admission, on the understanding that students enrolled in the programme are given priority over others when enrolling for courses in the compulsory part of their programme.
3. Persons who are not enrolled at the University have no right to participate in teaching and examination activities.

Article B4.13 – Determining results of examination Academic Skills

1. The Academic skills in the Master consist of components with a study load of 6 EC.
2. The student may complete the Academic skills in the Master by participating in the relevant components as described in the Appendix 1 and in the Course Catalogue.

Article B4.14 – Research Project (including master's Thesis and Colloquium)

1. It is mandatory that the student fills out a proposal in datanose (<https://datanose.nl/>), together with the supervisor. The track coordinator and the supervisor evaluate this proposal, and upon approval the student can start the research training. The supervisor is a permanent staff member of the VU or UvA Faculty of Science, appointed as an examiner by the Examinations Board.
2. At the end of the Research Project, the supervisor checks on the basis of the assessment form, if the student has sufficiently achieved the set exit qualifications.
3. For the assessment of the Research Project the advice and judgement of a second examiner is included, who pays particular attention to the structure and quality of the report and the presentation. A second examiner is a staff member of the VU and/or UvA Faculty of Science that is not directly involved with the research project.
4. If the mark for the Research Project is 8 or higher, the supervisor and the second examiner provide the Examinations Board with a written statement explaining their assessment results in more detail and their agreement with a potential Cum Laude.

Chapter 5. Academic student counselling

Article B5.1 – Academic student counselling

The academic student counselling for this programme consists of:

- a dedicated study advisor for all students of the programme.

Chapter 6. Teaching evaluation

Article B6.1 – Teaching evaluation

Teaching evaluation shall take place as follows:

1. Course evaluations with an UvA-Q questionnaire of all compulsory courses, and of courses requested by the Programme Committee (PC);
2. Course evaluations with a VU questionnaire for those courses organized at the VU;
3. Curriculum evaluation of the degree programme and the tracks within the programme;
4. Oral discussion in the Semester Response System (SRS) meetings.

All evaluation reports are discussed within the PC. The PC advises the programme director on the quality of the degree programme.

Chapter 7. Transitional and final provisions

Article B7.1 – Amendments

1. The dean shall establish amendments to the part B of these Regulations by independent decision – having heard the Programme Committee (PC) and with due regard for the authority of the relevant advisory bodies.
2. Amendments to these regulations take place following a recommendation by the PC relating to the regulations in their entirety, and with the endorsement of a joint meeting of those sections which do not relate to the subject of Article B7.13 paragraphs 2a to g, and paragraph 3 of the Act and the admission requirements for Master's programmes.
3. Amendments to the part B of these Regulations do not apply to the current academic year unless they can be reasonably assumed not to damage the student's interest.

Article B7.2 – Cancelled programme components

1. Cancelled courses:
 - a. Academic Skills: Critical Thinking
 - b. Computational Methods
 - c. Computational Methods Extension
 - d. From Genome to Physiome
 - e. Introduction to BV Quantization
2. Course that are not taught in 2019/2020 but are taught again in 2020/2021:
 - a. Computational Astrophysics
 - b. Radio Astronomy
 - c. Space Instrumentation for High-Energy Astrophysics
 - d. Stellar Populations (new course)

3. These courses have changed their name:
 - a. Stellar Atmospheres (old) - Atmospheres and Radiative Transfer
 - b. HEA: Accretion onto Compact Objects (old) - Disks and Accretion
 - c. Star and Planet Formation (old) - Planet Formation and Exoplanets
 - d. HEA: Radiative Processes and Relativistic Flows (old) - Extreme Astrophysics

Article B7.3 – Publication

1. The dean shall ensure a fitting publication of part A and B of these Regulations and the rules and guideline referred to in the Act.
2. These regulations can be accessed at the website of the Faculty.

Article B7.4 – Effective date

These Regulations enter into force with effect from 1 September 2019.

Thus drawn up by the Dean of the Faculty of Science on 27 August 2019.

Appendix 1 Description of the content and study load of the components

This list comprises the curriculum components of the Physics and Astronomy Master's programme tracks in the academic year 2019-2020. The contents of the components are described in the Course Catalogue. The amount of EC required in the schedules below refers to the *Regular programme*. It is different for the *Programme with a major* or the *Programme with a minor*, cf. Table 1.

Schedule track Advanced Matter and Energy Physics

Format: L: lectures; T: tutorials; CP: computer practicum; Lit: literature study;
As: assignment; Exp: experimental work; PW: practical work; PROJ: Project
Assessment: W: written exam; O: oral exam; P: presentation; R: report, PROJ: Project

Course	course code		EC	period	format	assessment
	UvA	VU				
Year 1						
Compulsory: (24 EC)						
AMEP Lab Project	5354AML6Y		6	1-6	Exp	P, R
Emergent Energy Materials	5354EMEM6Y		6	1	L, T	W
Hydrodynamics	5354HYDR6Y	X_428536	6	4	L, T	W, PROJ, As
Quantum Optics	5354QUOP6Y	X_420118	6	2	L, T	W, O
Showcase 1	53541SHO0Y		0	1	L	none
Showcase 2	53548SHO0Y		0	2	L	none
Restricted-choice electives 1: (6 EC required)						
Statistical Physics and Condensed Matter Theory I	53541SPC6Y	X_420083	6	1	L, T	W
Statistical Physics of Soft & Living Matter	5354SPSL6Y		6	4	L, T	P, W
Restricted-choice electives 2: (18 EC required)						
Bose Einstein Condensates	5354BOEC6Y		6	2	L, T	W, O
Fermi Quantum Gases	5354FEQG6Y	X_428514	6	5	L, T	W, O
Mathematica for Physicists	5354MAFP3Y	X_428533	3	3	L, T	PROJ

Ultrafast Laser Physics	53548ULL6Y	X_422556	6	4	L, T	W

Academic Skills: (6 EC required)

See Academic Skills list below

Year: 2

Compulsory: (60 EC required)

Research Project Physics and
Astronomy 1

5354RPP60Y

36-60

1-6

Research Project Physics and
Astronomy 2

53542RP60Y

18-60

1-6

Schedule track Astronomy & Astrophysics

Format: L: lectures; T: tutorials; CP: computer practicum; Lit: literature study;
As: assignment; Exp: experimental work; PW: practical work; PROJ: Project

Assessment: W: written exam; O: oral exam; P: presentation; R: report, PROJ: Project

Course	course code		EC	period	format	assessment
	UvA	VU				
Year 1						
Compulsory: (9 EC)						
Astrophysics Colloquium	5214ASCO0Y		0	1-6	L	none
Open Problems in Modern Astrophysics	5354OPIM3Y		3	1	L, T	W, R, O
Statistical Methods for the Physical Sciences	5354SMFT6Y		6	3	L, T	R, O
Restricted-choice electives 1 (18 EC required)						
Atmospheres and Radiative Transfer	5214STAT6Y		6	1	L, T	W
Disks and Accretion	5214HAOC6Y		6	2	L, T	W
Extreme Astrophysics	5354EXAS6Y		6	4	L, T	W
Structure and Evolution of Stars	5214STES6Y		6	2	L, T	W, R, P
Restricted-choice electives 2 (18 EC required)						
Astronomical Interferometry	5354ASIN6Y		6	5	L, T	W, R
Astroparticle Physics	5354ASPH6Y		6	4	L, T	W
Astrovaria	5214ASTR6Y		6	1-6	PROJ	R, O
Basic Linux and Coding for AA	5214BLCF3Y		3	1	L, CP	W
Cosmology	5214COSM6Y		6	2	L, T	W
Fluid Dynamics (this course may not be taught in 19/20)	5214FLDY6Y		6	5	L, T	W, P
General Relativity	5354GERE6Y		6	1	L, T	W, O
GRAPPA Student Seminar	5354GRSS6Y		6	6	L	P, R
Gravitational Waves	5354GRWA3Y		3	5	L, T	W
Observation Project	5214OBPR6		6	1,6	PROJ	R
Particle Physics I	53541PAP6Y		6	1	L, T	W
Planet Formation and Exoplanets	5214STPF6Y		6	4	L, T	W
Academic Skills: (3 more EC required in addition to Open Problems in Modern Astrophysics)						
See Academic Skills list below						
Year 2						
Compulsory: (60 EC required)						
Research Project Physics and Astronomy 1	5354RPP60Y		36- 60	1-6		
Research Project Physics and Astronomy 2	53542RP60Y		18- 60	1-6		

Schedule track Biophysics and Biophotonics (formerly called Physics of Life and Health)

Format: L: lectures; T: tutorials; CP: computer practicum; Lit: literature study;
As: assignment; Exp: experimental work; PW: practical work; PROJ: Project

Assessment: W: written exam; O: oral exam; P: presentation; R: report, PROJ: Project

Course	course code		EC	period	format	assessment
	UvA	VU

*this course can be 3 EC or 6 EC. The 6 EC course should be approved by the Examinations Board before the start of your project. Two individual projects of 3 EC should be approved by the Track Coordinator before the start of your projects.

Schedule Physics Majors and Minors

Major Science in Society

The Master's graduate with a specialization Science in Society combines an academic approach with the skills and competences that will allow him or her to perform scientific research at the interface of the biomedical sciences and society. The specialization aims to develop strategies that contribute to an understanding of complex societal problems and strategies to solve complex societal problems through interdisciplinary research. In addition, the programme analyses the social, economic and ethical aspects of new developments in the biomedical sciences, so as to assess their implications for society. Master's graduates have the necessary skills to collaborate and communicate with researchers from various scientific disciplines (including but not limited to those in the life sciences) and societal actors, and the ability to use these academic insights.

More information of the majors and minors can be found on <https://student.uva.nl/phys-astro/shared/studentensites/fnwi/ew-gedeelde-content/en/az/majors-and-minors/majors-and-minors.html>

Major Science Communication

Communication about science takes place between academic peers and between scientists and the general public. This makes the Communication specialization a complex and dynamic field of research and practice, for example on patient participation in health research, the use and effects of media metaphors and hype, and public understanding of emergent technologies. The Master's graduate with this specialization has a theoretical understanding of the complex problems that arise during such communication processes and has developed the necessary skills to act professionally at this interface to enhance communication and the outcomes of communication between scientific actors and society.

More information of the majors and minors can be found on <https://student.uva.nl/phys-astro/shared/studentensites/fnwi/ew-gedeelde-content/en/az/majors-and-minors/majors-and-minors.html>

Major Teaching

Courses are taught in Dutch.

Met de opleiding wordt beoogd studenten op te leiden tot Leraar Voorbereidend Hoger Onderwijs. De opleiding combineert het ambachtelijke met het academische: studenten ontwikkelen een stevige kennisbasis en een onderzoekende houding in het vak en beroep, en staan tegelijkertijd met twee benen in de praktijk waar ze het 'ambacht' leren. Studenten worden opgeleid tot teamwerkers die initiatief nemen en draagvlak zoeken, en die zichzelf én een rolmodel voor leerlingen durven te zijn. Zij zijn gericht op innovatie en dragen actief bij aan het creëren van nieuwe kennis en aan schoolvak- en onderwijsontwikkeling.

More information of the majors and minors can be found on <https://student.uva.nl/phys-astro/shared/studentensites/fnwi/ew-gedeelde-content/en/az/majors-and-minors/majors-and-minors.html>

Appendix 2 Courses for the pre-master's programme

As explained in §3.1.2 the Admissions Board may draw up a pre-master's programme of maximum 42 EC. The pre-master's programme consists of a selection of the components from the table below. Depending upon the track, courses from the top five rows are compulsory. Courses with Dutch names will be taught in Dutch, the other courses will be taught in English.

Format: L: lectures; T: tutorials; CP: computer practicum; Lit: literature study;
As: assignment; Exp: experimental work; PW: practical work; PROJ: Project

Assessment: W: written exam; O: oral exam; P: presentation; R: report, PROJ: Project

Course name	course code	EC	Period	Format	Assessment

Appendix 3 Final attainment levels of the Major Teaching, and learning objectives minor TESLA and the minor Teaching

Final attainments levels of the Major Teaching

De bekwaamheidseisen Leraar Voorbereidend Hoger Onderwijs zijn, naast de voor alle wo-masteropleidingen geldende Dublin-descriptoren en algemene wettelijke eisen, richtinggevend voor de doelstellingen en eindtermen van de lerarenopleidingen Voorbereidend Hoger Onderwijs. Deze bekwaamheidseisen zijn vastgelegd in de Wet op het voortgezet onderwijs (artikel 36 e.v.) en het Besluit bekwaamheidseisen onderwijspersoneel (zie 'Besluit bekwaamheidseisen onderwijspersoneel' (<http://wetten.overheid.nl/BWBR0018692/2017-08-01>) en 'Besluit van 16 maart 2017 tot wijziging van het Besluit bekwaamheidseisen onderwijspersoneel en het Besluit bekwaamheidseisen onderwijspersoneel BES in verband met de herijking van de bekwaamheidseisen voor leraren en docenten' (<https://zoek.officielebekendmakingen.nl/stb-2017-148.html>)).

De eindtermen zijn geordend in twee categorieën:

- Eindtermen die rechtstreeks te maken hebben met de kern van het beroep: het onderwijsleerproces en het leren van leerlingen, te weten de vakinhoudelijke, vakdidactische en pedagogische bekwaamheid (eindterm 1 t/m 3).
- Eindtermen die betrekking hebben op meer algemene aspecten van professioneel handelen ten dienste van die kern van het beroep: te weten samenwerking met collega's en de omgeving van de school en met reflectie en persoonlijke en professionele ontwikkeling (eindterm 4 t/m 5).

De opleiding draagt er zorg voor dat de afgestudeerde Leraar VHO in ieder geval:

1. aantoonbaar beschikt over vakinhoudelijke kennis en vaardigheden die het wo-bachelorniveau overstijgen dan wel verdiepen. Dat wil zeggen dat de afgestudeerde eerstegraads leraar:
 - a. de inhoud van vak beheerst / boven de leerstof staat;
 - b. daardoor de leerstof, voor het schooltype waarin hij werkzaam is, zo kan samenstellen, kiezen of bewerken dat zijn leerlingen die kunnen leren;
 - c. vanuit zijn vakinhoudelijke expertise verbanden kan leggen met het dagelijks leven, met werk en met wetenschap en het onderwijs betekenisvol kan maken voor de leerlingen;
 - d. daarmee kan bijdragen aan de algemene vorming van zijn leerlingen.
2. aantoonbaar beschikt over vakdidactische kennis en vaardigheden. Dat wil zeggen dat de afgestudeerde Leraar VHO:
 - a. de vakinhoud weet te vertalen in leerplannen of leertrajecten en dat doet op een professionele, ontwikkelingsgerichte werkwijze;
 - b. de vakinhoud leerbaar maakt voor en afstemt op het niveau en kenmerken van zijn leerlingen, daarbij doelmatig gebruikmakend van (digitale) beschikbare leermiddelen;
 - c. het onderwijs kan ontwikkelen en evalueren;
 - d. het onderwijs doelmatig kan uitvoeren en het leren van leerlingen kan organiseren;
 - e. de vak inhoud/didactiek afstemt met zijn collega's en laat aansluiten bij de visie en missie van zijn school.

3. aantoonbaar beschikt over pedagogische kennis en vaardigheden. Dat wil zeggen dat de afgestudeerde Leraar VHO:
 - a. de ontwikkeling van zijn leerlingen volgt in hun leren en gedrag en daarop zijn handelen afstemt;
 - b. bijdraagt aan de sociaal-emotionele en morele ontwikkeling van zijn leerlingen;
 - c. bijdraagt aan de burgerschapsvorming en de ontwikkeling van de leerling tot een zelfstandige en verantwoordelijke volwassene;
 - d. met een professionele, ontwikkelingsgerichte werkwijze en in samenwerking met zijn collega's een veilig, ondersteunend en stimulerend leerklimaat voor zijn leerlingen kan realiseren;
 - e. in staat is om oordelen te formuleren, rekening houdend met de sociaal-maatschappelijke en ethische verantwoordelijkheden die horen bij het beroep.
4. aantoonbaar reflecteert ten behoeve van persoonlijke en professionele ontwikkeling. Dat wil zeggen dat de afgestudeerde Leraar VHO:
 - a. in staat is kritisch te reflecteren op alle aspecten die met zijn persoonlijkheid, zijn motivatie, attitudes, verwachtingen en cognities te maken hebben (die onder meer tot uiting komen in het pedagogisch handelen) en feedback hieromtrent ter harte te nemen
 - b. op onderzoeksmatige wijze de (eigen) onderwijspraktijk verbetert en blijft ontwikkelen;
 - c. zijn (vak)kennis en -kunde actueel houdt;
 - d. in staat is zijn eigen positie te bepalen ten aanzien van de missie en visie van de school/instelling waar hij werkzaam is en bereid is een constructieve bijdrage te leveren aan de ontwikkeling van zijn vak/het onderwijs in de school.
5. aantoonbaar samenwerkt en communiceert met collega's en omgeving. Dat wil zeggen dat de afgestudeerde Leraar VHO:
 - a. zijn pedagogisch handelen kan afstemmen met zijn collega's en met anderen die voor de ontwikkeling van de leerling verantwoordelijk zijn;
 - b. de ontwikkeling van zijn vak/curriculum in de school kan afstemmen met zijn collega's en met anderen die voor de ontwikkeling van de leerling verantwoordelijk zijn.
6. Onverminderd het bepaalde in lid 1 heeft de afgestudeerde van afstudeerrichting Biologie een gedegen vakinhoudelijke kennis van en inzicht in het vakgebied en de vakdidactiek van Biologie en kan op basis daarvan aantrekkelijke, effectieve en efficiënte leeractiviteiten ontwerpen, uitvoeren, begeleiden en evalueren voor het schoolvak Biologie in de onderbouw en/of bovenbouw.
7. Onverminderd het bepaalde in lid 1 heeft de afgestudeerde van afstudeerrichting Natuurkunde een gedegen vakinhoudelijke kennis van en inzicht in het vakgebied en de vakdidactiek van Natuurkunde en kan op basis daarvan aantrekkelijke, effectieve en efficiënte leeractiviteiten ontwerpen, uitvoeren, begeleiden en evalueren voor het schoolvak Natuurkunde in de onderbouw en/of bovenbouw.
8. Onverminderd het bepaalde in lid 1 heeft de afgestudeerde van afstudeerrichting Scheikunde een gedegen vakinhoudelijke kennis van en inzicht in het vakgebied en de vakdidactiek van Scheikunde en kan op basis daarvan aantrekkelijke, effectieve en efficiënte leeractiviteiten ontwerpen, uitvoeren, begeleiden en evalueren voor het schoolvak Scheikunde in de onderbouw en/of bovenbouw.
9. Onverminderd het bepaalde in lid 1 heeft de afgestudeerde van afstudeerrichting Wiskunde een gedegen vakinhoudelijke kennis van en inzicht in het vakgebied en de vakdidactiek van

Wiskunde en kan op basis daarvan aantrekkelijke, effectieve en efficiënte leeractiviteiten ontwerpen, uitvoeren, begeleiden en evalueren voor het schoolvak Wiskunde in de onderbouw en/of bovenbouw.

10. Onverminderd het bepaalde in lid 1 heeft de afgestudeerde van afstudeerrichting Aardrijkskunde een gedegen vakinhoudelijke kennis van en inzicht in het vakgebied en de vakdidactiek van Aardrijkskunde en kan op basis daarvan aantrekkelijke, effectieve en efficiënte leeractiviteiten ontwerpen, uitvoeren, begeleiden en evalueren voor het schoolvak Aardrijkskunde in de onderbouw en/of bovenbouw.
11. Onverminderd het bepaalde in lid 1 heeft de afgestudeerde van afstudeerrichting Informatica een gedegen vakinhoudelijke kennis van en inzicht in het vakgebied en de vakdidactiek van Informatica en kan op basis daarvan aantrekkelijke, effectieve en efficiënte leeractiviteiten ontwerpen, uitvoeren, begeleiden en evalueren voor het schoolvak Informatica in de onderbouw en/of bovenbouw.

Learning objectives of the minor Tesla

By completing the Tesla Minor the graduate is fit to start a career in demanding environments which require abilities to utilize the disciplinary science background in research, corporate, civil society, governmental and advisory work environments.

All learning objectives fall into at least one of the following categories: (1) Information processing (2) Teamwork (3) Project Work (4) Communication (5) Self-reflection.

Further information about the minor Tesla can be found in the study guide

<http://www.teslaminor.nl>

Minor teaching na een bachelor met een educatieve minor

De student volgt het tweede semester van de master leraar Voorbereidend Hoger Onderwijs (VHO) die de Interfacultaire Lerarenopleidingen (ILO) aanbiedt. De eindtermen komen overeen met die van de major teaching, zie hierboven.

Minor teaching na een bachelor zonder educatieve minor

De student volgt het eerste semester van de master leraar VHO die de ILO aanbiedt.

De opleiding leidt niet tot een bevoegdheid.

De eindtermen komen grotendeels overeen met die van de educatieve minor die de ILO aanbiedt.

De student is op basis van voldoende theoretisch inzicht, een professionele houding en voldoende vaardigheid in staat om:

1. een goede samenwerking met en tussen leerlingen tot stand te brengen;
2. voor groepen en voor individuele leerlingen een veilige leeromgeving te creëren;
3. voor groepen en voor individuele leerlingen een krachtige leeromgeving in te richten waarin leerlingen zich op een goede manier leerinhouden van het vakgebied eigen maken;
4. in groepen en in andere contacten met leerlingen een overzichtelijk, ordelijk en taakgericht leer- en werkklimaat tot stand te brengen;
5. relevante informatie uit te wisselen met collega's in de school en uitkomsten daarvan te benutten;
6. relevante informatie uit te wisselen met verzorgers van leerlingen buiten school en daarin te zorgen voor afstemming;

7. eigen opvattingen over het leraarschap en de eigen bekwaamheden als leraar, te expliciteren, kritisch te onderzoeken en verder te ontwikkelen op basis van theoretische inzichten en empirische gegevens.
