

Manual installing VPN for Windows

This guide explains how to install the UvA VPN software (Pulse secure) on a Windows computer and how to set up a VPN connection to the UvA network

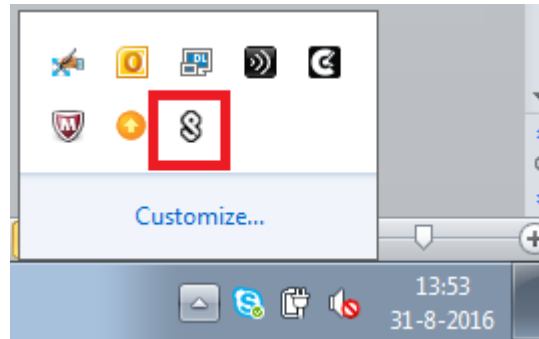

Navigate to student.uva.nl or staff.uva.nl and select your degree programme, faculty or service unit. Navigate to the A-Z and go to VPN (Accessing the UvA network) and select Download UvAVPN software.

Select *Windows VPN Installer Pulse Secure* and download the software. Save the file.

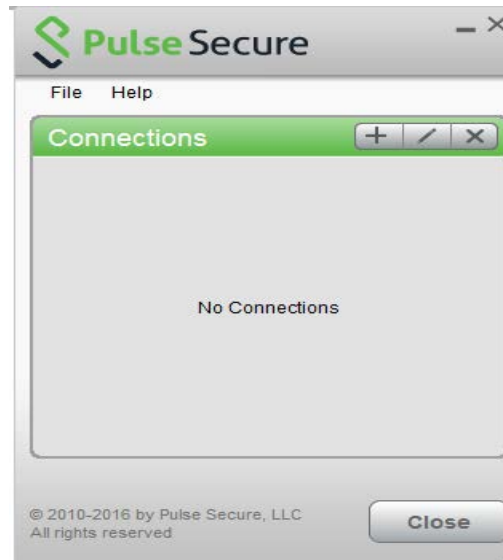

Doubleclick on the installer software. The installation starts immediately and will finish automatically.

Start Pulse Secure. Click on the hidden icons on the right of the menu bar and doubleclick on the Pulse Secure icon. You can also go to Start > All Programs > Pulse Secure > Pulse Secure to open Pulse Secure.

If the connection profile is not seen click the *plus icon (+)*.

Fill in the following:

Name : UvAVPN
Server URL : vpn.uva.nl

Select *Add*.

Select *Connect* and enter your UvA-net ID and password.

Select *Connect* again. The installation of the VPN connection is completed.
